300W Broadband High Power Amplifier
2MHz-30MHz

Note: Photo is for illustration purposes only.
Please refer to outline drawing.

Product Description

RFLUPA02M30MB is a broadband high power amplifier with a frequency range of 2 to 30MHz.

The power output of this amplifier is 55dBm typical. The typical small signal gain is 55dB with a gain flatness of ±2.5dB.

The working temperature of this product is between - 40℃ and +60℃.

Features

- Broadband High Power Amplifier
- Small Signal Gain 55dB Typical
- Output Saturation Power 55dBm Typical
- Supply Voltage +48VDC
- 50 Ohm Matched Input / Output

Typical Applications

- Wireless Infrastructure
- Military and Aerospace Applications
- Test Instrumentation
- Radar Systems
- 5G Wireless Communications
- Microwave Radio Systems
- TR Modules
- Research and Development
- Cellular Base Stations

Electrical Specifications (T_A=+25ºC)

Parameter		Min	Typ	Max	Units
Frequency Range		2		30	MHz
Gain			55		dB
Gain Flatness			±2.5		dB
Gain Variation Over Temperature (-20℃~+60℃)			±3.0		dB
Input Return Loss			10		dB
Saturated Output Power (Psat)			55		dBm
Isolation S12			-60		dB
Supply Current (Vcc=+48V)			20		A
Weight	Net		/ Max.		lbs.
	Including Heat sink		/ Max.		
Impedance			50		Ohms
Input / Output Connectors			SMA- Female(Input)-N-Female(Output)		
DC Interface Connector			Hybrid , D-Sub 7-Pin,Male		
Package			Epoxy Sealed (Standard)		
			Hermetically Sealed (Optional)

Absolute Maximum Ratings

Parameter	Rating
Supply Voltage Range	+50VDC
*RF Input Power (RFIN)	Psat – Large Signal Gain

Bias Up Procedure

1.Connect Ground Pin

2.Connect input and output

3.Connect +48V biasing

Bias Down Procedure

1.Turn off +48V biasing

2.Remove RF connection

3.Remove Ground.

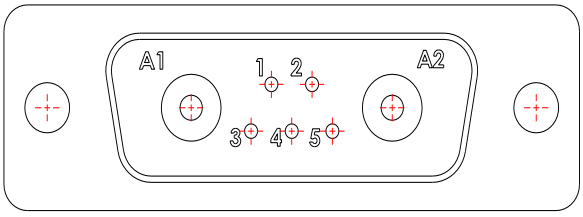
Environmental Specifications and Test Standards

Parameter	Description
Operational Temperature	-40ºC to +60ºC (Case Temperature)
Storage Temperature	-50ºC to +105ºC
Thermal Shock	-40ºC → +85ºC (5 Cycles / 10 hours)
**Random Vibration	MIL-STD-202G Table 214-I, Test Condition Letter C 1.5 Hours Per Axis
High Temperature Burn In	Temperature +60ºC for 72 Hours
Shock	1. Weight >20g, 50g half sine wave for 11ms, Speed variation 3.44m/s 2. Weight <=20g, 100g Half sine wave for 6ms, Speed variation 3.75m/s 3. Total 18 times (6 directions, 3 repetitions per direction).
Altitude	Standard: 30,000 Ft (Epoxy Sealed Controlled Environment) Optional: Hermetically Sealed (60,000 ft. 1.0 PSI min)
Hermetically Sealed (Optional)	MIL-STD-883 (For Hermetically Sealed Units)

**For vibration testing details please see additional information section.

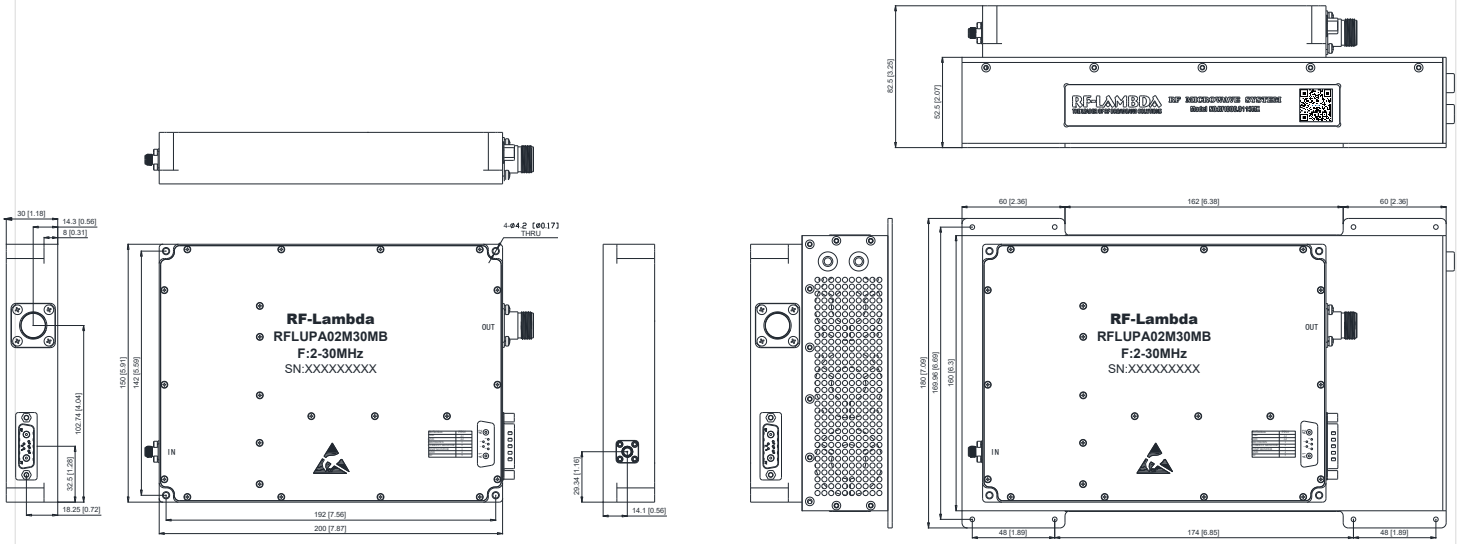
DC Interface Connector

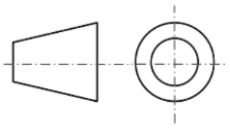
Male D-Sub is on the housing
The mating Female part number: 680S7W2203L201



Pin #	Description	Specifications
A1	VDD	48VCC
A2	GND	Ground
1	SHUTDOWN	Amplifier Disable: TTL Logic High (3.3V) (Internally Pulled-Low)
2	CURRENT MONITOR	Analog voltage relative to IDD @ 100mV per Ampere
3	TEMP MONITOR	Analog voltage relative to Module's Temperature @ 10 mV/°C
4	GND	Ground
5	NC	No electrical connection

Outline Drawing





Notes:
1. Package Material: Aluminum
2. Finish: Conductive Oxidation
3. All dimensions are in millimeters [inches].
4. Housing Tolerances ±0.2[0.008] unless otherwise specified(Excl Heat Sink).
5. Heat sink required during operation (sold separately). Matching heatsink is listed on our website. If customer would like to use their own cooling method, please make sure the amplifier will operate under the specs that listed in page 2 of this datasheet.
6. Standard torque wrench must be used to secure RF connectors.

Packing List

ID	Description	QTY
1	Fig a. D-Sub cable (1262000118)	1

Part Number	Modification	Description
RFLUPA02M30MB	Input Connector SMA-Female and Output Connector N-Female	2MHz-30MHz Power Amplifier

Amplifier Use

Ensure that the amplifier input and output ports are safely terminated into a proper 50 ohm load before turning on the power. Never operate the amplifier without a load. A proper 50 ohm load is defined as a load with impedance less than 1.9:1 or return loss larger than 10dB relative to 50 Ohm within the specified operating band width.

Power Supply Requirements
Power supply must be able to provide adequate current for the amplifier. Power supply should be able to provide 1.5 times the typical current or 1.2 times the maximum current (whichever is greater).

In most cases, RF - Lambda amplifiers will withstand severe mismatches without damage. However, operation with poor loads is discouraged. If prolonged operation with poor or unknown loads is expected, an external device such as an isolator or circulator should be used to protect the amplifier.

Ensure that the power is off when connecting or disconnecting the input or output of the amp.

Prevent overdriving the amplifier. Do not exceed the recommended input power level.

Adequate heat-sinking required for RF amplifier modules. Please inquire.

Amplifiers do not contain Thermal protection, Reverse DC polarity or Over voltage protection with the exception of a few models. Please inquire.

Proper electrostatic discharge (ESD) precautions are recommended to avoid performance degradation or loss of functionality.

What is not covered with warranty?

Each RF - Lambda amplifier will go through power and temperature stress testing.
Since the die, ICs or MMICs are fragile, these are not covered by warranty. Any damage to these will NOT be free to repair.
